

The graph displays the percentage of individuals with a history of mental health treatment across different age groups (18-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75+). The y-axis represents the percentage from 0 to 100. The x-axis represents the age groups. The legend indicates six data series: All individuals (solid black line), African-American (solid red line), Caucasian (solid green line), Other (solid orange line), female (dashed red line), and male (dashed blue line). The graph shows that the percentage of individuals with a history of mental health treatment generally increases with age, with African-American individuals showing the highest rates and Caucasian individuals showing the lowest rates. The percentage for females is consistently higher than for males across all age groups.

Age Group	All individuals	African-American	Caucasian	Other	female	male
18-24	~15%	~25%	~10%	~18%	~20%	~12%
25-34	~20%	~30%	~12%	~22%	~25%	~15%
35-44	~25%	~35%	~15%	~25%	~30%	~20%
45-54	~30%	~40%	~18%	~28%	~35%	~25%
55-64	~35%	~45%	~20%	~30%	~40%	~30%
65-74	~40%	~50%	~22%	~32%	~45%	~35%
75+	~45%	~55%	~25%	~35%	~50%	~40%
